#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

1. Claims 15-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 15, the limitation of "applying a scale factor to at least a selected one of ..." is confusing. There is no support for this limitation in the specification. The specification describes the adding of a factor to the input signal but not to the multibit strings output of the analog to digital converter.

### Response to Amendment

2. The amendment filed 11/14/2006 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows:

Claim 15 recites the added limitation of "applying a scale factor to at least a selected one..." is confusing. There is no support for this particular limitation in the specification.

Applicant is required to cancel the new matter in the reply to this Office Action.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

<sup>(</sup>b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/537,670

Art Unit: 2819

4. Claims 15-17 and 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Yee (USP 5,309,157).

As per claims 15 and 22 Yee discloses in Figure 13, k flash analog to digital converters (430, 432) each flash converter generates multiple bit digital output (b2, b3) and (b0, b1). The analog input of the converter is compared to reference voltage stepsize as shown in Figure 16 to generate the final digital output which is supposedly an accurate representation of the analog input signal (see also col. 14, lines 36-51). As per claims 16 and 23, Figure 13 of Yee shows that both converters output the same number of bits. As per claims 17 and 24, it is inherent that the number of bits of the converter might be designed to be different as long as the final digital output accurately represents the analog input signal.

### Allowable Subject Matter

- 5. Claims 18-19 and 25-28 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 6. The prior art of record does not teach a converter system that comprises at least a first and a second analog to digital converter that are coupled in series with an arithmetic unit; the arithmetic unit receives the input voltage and is adapted to change the input voltage of the converter to be within a plurality of contiguous voltage subranges of the converters.

#### Response to Arguments

Art Unit: 2819

7. Applicant's arguments filed on 11/14/2006 have been fully considered but they are not persuasive. Applicant argues that the Yee reference does not teach the limitations of applying a scale factor to the multibit string of the analog to digital converter. There is no support for this particular limitation in the specification. Although it seems that the reference voltages are scaled because they are not uniformly distributed, the way the reference voltages are scaled are not described. This constitutes new matter. Even with the added limitation the cited reference can still be read on the claims.

#### Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
